

Felipe Ramires Terrazas

Analytics Engineer

+55 (19) 9 9969 2741 | [Website](#) | [LinkedIn](#) | felipe.agro.terrazas@gmail.com

PROFESSIONAL SUMMARY

Analytics Engineer with 7+ years building and governing enterprise data systems on Snowflake, focused on data quality, observability, and transforming unstructured data into structured, analytics-ready layers. Experienced integrating AI-driven platforms (Dataiku, ThoughtSpot AI) with Snowflake ecosystems. Strong Python and SQL skills with a track record of architecting Snowflake infrastructure, enforcing data quality pipelines, and delivering reliable data products at enterprise scale.

SKILLS

Snowflake: Architecture & Design (RBAC, Warehouses, Schemas), SQL Performance Tuning, Cost Optimization, ETL/ELT Pipelines, AWS

Data Engineering & Quality: dbt (Modeling, Testing, Source Freshness, Data Contracts), Fivetran, CI/CD (GitHub Actions, git), Data Observability Dashboards, Alation

Programming: Python, SQL (Snowflake / Oracle / SQL Server), R, DAX

AI & Analytics Platforms: Dataiku, ThoughtSpot AI (Natural Language Search), Power BI (Expert), Tableau, QlikSense

Collaboration & Delivery: Agile/SCRUM (Jira/Confluence), Stakeholder Management, Data Governance (Alation/Confluence)

PROFESSIONAL EXPERIENCE

YMX Logistics | Analytics Engineer

Jul 25 – Present

- Architected Snowflake infrastructure from the ground up, defining RBAC policies, warehouse sizing, and schema design to serve as the system of record for all business-critical data, enabling reliable data consumption across the organization.
- Designed and deployed data observability controls: authored dbt schema, referential integrity, source freshness, and custom singular tests to continuously monitor data quality across all pipeline layers, eliminating recurring discrepancy incidents.
- Engineered ETL/ELT pipelines to ingest, parse, and transform unstructured and semi-structured data into governed, analytics-ready Snowflake tables using a modular layered dbt architecture (staging → intermediate → marts).
- Drove a **50% reduction** in Snowflake warehousing costs through query optimization, warehouse auto-suspend tuning, and engineering best practices.

WEX INC | Risk Data Analyst

Nov 23 – Jul 25

- Modeled Snowflake tables and views to feed ThoughtSpot's AI-driven natural language search, ensuring the structured data layer delivered accurate, context-aware responses for non-technical end users, directly analogous to structuring data for LLM consumption.
- Developed and maintained dbt models and data quality tests on Snowflake, ensuring accuracy and consistency of risk, collections, and fraud datasets consumed by downstream analytics and AI tools.
- Conducted advanced SQL analyses in Snowflake to surface risk and fraud patterns in high-volume datasets, translating findings into prioritized, actionable recommendations for business teams.
- Designed and maintained scalable Tableau dashboards and data marts in partnership with Data Engineering, providing continuous monitoring of risk portfolio health in a regulated financial services environment.

CMA CGM | BPM Specialist

Nov 21 – Nov 23

- Led Digital Transformation initiatives including QlikSense analytics deployments and Python-based automation projects, improving operational visibility and enabling data-driven decisions at scale.
- Established analytics best practices, governance frameworks, and documentation standards in Confluence; facilitated training programs that accelerated self-service tool adoption across business units.

SmartBreeder | Business Intelligence Analyst

Dec 19 – Nov 21

- Built and maintained a SQL Server data warehouse and Power BI reporting layer, creating a single source of truth that supported strategic decision-making and eliminated data inconsistencies.
- Drove analytics adoption by delivering structured Power BI training across all skill levels, empowering teams to independently answer data questions and reduce analyst bottlenecks.

Cargill | Projects Intern

Jan 19 – Dec 19

- Delivered digital automation tools (Python, VBA, Power BI, Power Apps) for internal departments, streamlining workflows and freeing capacity for higher-value analytical work.

EDUCATION

Agricultural Engineering – University of São Paulo (ESALQ)

Jan 15 – Dec 19

MBAs: IT Project Management (2024), Big Data & Analytics (2023), Logistics Management & Production Engineering (2023), Applied Data Science (2022), Business Intelligence (2021).
